

EZQR

How to Make a Branded QR Code Link

1

Create a dynamic QR code

Sign up, add your destination, and EZQR creates a dynamic code linked to your dashboard.

2

Choose how the link reads

In your dashboard, add a custom, branded label so your name is right there in the link. Switch the style whenever you like.

3

Download and share

Download the code and put it on signage, badges, cards, and printed programs — the branded label rides along.

4

Update anytime

Change the destination or the label later without reprinting. The printed code keeps working, and every scan is tracked.
