# How to Make an Editable QR Code

**1**

## Create a dynamic QR code in your dashboard

Sign up for an EZQR account, paste the destination URL, and we'll generate a dynamic QR code linked to your dashboard.

**2**

## Download and print as normal

Use the high-resolution PNG, JPG, or SVG download. Put it on yard signs, packaging, business cards, posters — anywhere.

**3**

## Update the destination whenever you need to

Open the dashboard, click the code, change the destination URL, save. The printed code is unchanged but every new scan goes to the new link.

**4**

## Watch the analytics roll in

Every scan is tracked: count, time, country, device. Use it to learn what is working without setting up Google Analytics on the destination.

**Make your own QR code → [ezqr.ca/editable-qr-codes](https://ezqr.ca/editable-qr-codes)**

**[ezqr.ca/editable-qr-codes](https://ezqr.ca/editable-qr-codes)**

Scan the code or visit the URL to get started.
