How to Make an Email QR Code

1

Enter the email address

Type the address the message should go to. The QR code preview appears as soon as you add it.

2

Add a subject and message (optional)

Fill in a subject line and a pre-written message body so the email is ready before it is even opened. Leave them blank for a plain to-address code.

3

Download the QR code

Download as PNG, JPG, or SVG. Use SVG for print so it stays sharp on cards, signs, and packaging at any size.

4

Print it and scan-test on both phones

Scanning opens the person's email app with everything pre-filled — they review and hit send themselves, on iPhone and Android alike. Test on both before printing a batch.
