How to Make a Phone Number QR Code

1

Enter the phone number

Type the number to call. Start with a plus and country code (like +1 for North America) so it works for international scanners; a local number is fine for a local-only audience.

2

Download the QR code

Download as PNG, JPG, or SVG. Use SVG for print so it stays sharp at any size.

3

Print it at 2 cm or larger

Place it on your card, sign, or storefront window with clear space around it, printed at least 2 cm wide so phones lock on quickly.

4

Scan-test on iPhone and Android

Scanning opens the dialer with the number filled in — the person taps call themselves. Confirm the right number appears on both phones before printing a batch.
