

EZQR

How to Make a QR Code for a Facebook Page

1

Open your Facebook page in a browser

Make sure you're on the public-facing page, not the admin view. The URL should look like `facebook.com/YourPageName` or `facebook.com/profile.php?id=...`

2

Copy the URL from the address bar

Use the clean version — `facebook.com/YourPageName` — when possible. It is shorter and produces a tidier QR code.

3

Paste it into EZQR

The QR code preview generates instantly. Download as PNG, JPG, or SVG and you're ready to print.

4

Test the scan with your own phone

Scan with the camera app — make sure it opens the Facebook page (in the FB app if installed, otherwise in mobile browser).

Make your own QR code → ezqr.ca/qr-code-for-facebook

ezqr.ca/qr-code-for-facebook

Scan the code or visit the URL to get started.
