

EZQR

How to Make a QR Code for a Google Form

1

Open your Google Form and click Send

In the share dialog, switch to the link icon tab and copy the form URL. Tick "Shorten URL" if you want a tidier forms.gle link — it works exactly the same in the QR code.

2

Paste the link into EZQR

On the home page, paste the URL into the generator. The QR code preview updates instantly. Download as PNG, JPG, or SVG.

3

Print or project it where people will scan

Classroom slide, event poster, table tent, restaurant receipt, end-of-class handout — anywhere a phone camera can see it.

4

Optional: make it editable

If you'll reuse the same flyer or sign for different forms over time, sign up for an EZQR account and create a dynamic QR code instead. Update the form link any time without reprinting.

Make your own QR code → ezqr.ca/qr-code-for-forms

ezqr.ca/qr-code-for-forms

Scan the code or visit the URL to get started.
