

EZQR

How to Make a QR Code for Google Docs

1

Open the Google Doc and click Share

A desktop browser is easiest — the green Share button is at the top right of the document.

2

Set General access to Anyone with the link

Change the dropdown from "Restricted" to "Anyone with the link" and set the role to Viewer so scanners can read the doc but not edit it. This is the step that makes or breaks the QR code.

3

Click Copy link

You will get a URL that looks like `docs.google.com/document/d/.../edit`.

4

Paste the link into EZQR

Your QR code appears instantly. Download it as PNG, JPG, or SVG — SVG scales cleanly for large-format printing.

5

Scan-test before printing

If the scan lands on "Request access," go back and fix the sharing setting — the doc is not public yet. You do not need to regenerate the code.

Make your own QR code → ezqr.ca/qr-code-for-google-docs

ezqr.ca/qr-code-for-google-docs

Scan the code or visit the URL to get started.
