

How to Make a QR Code for a Google Doc

1

Open the Google Doc

In a desktop browser is easiest, since the share dialog is more flexible there. Click the green Share button at the top right.

2

Set General access to Anyone with the link

Under the share dialog, change the dropdown from "Restricted" to "Anyone with the link." Set the role to Viewer (so scanners can read but not edit). Skip this step and the QR code will not work for anyone outside your domain.

3

Click Copy link

You will get a URL that looks like docs.google.com/document/d/.../edit.

4

Paste the link into EZQR's generator

The QR code generates instantly. Download as PNG, JPG, or SVG.

5

Test the scan with your phone

Always scan the printed code yourself before mass-printing. If it lands on "Request access," your sharing setting is not right yet.

Make your own QR code → ezqr.ca/qr-code-for-google-drive

ezqr.ca/qr-code-for-google-drive

Scan the code or visit the URL to get started.
