

EZQR

How to Make a QR Code for Instagram

1

Copy your Instagram link

Use [instagram.com/yourhandle](https://www.instagram.com/yourhandle) for your profile, or open a post or reel, tap Share, and choose Copy link to feature that exact page.

2

Paste it into EZQR

Drop your handle or link into the generator and the QR code preview appears instantly.

3

Download the code

Download as PNG, JPG, or SVG. Use SVG for print so it stays crisp on cards, packaging, and posters at any size.

4

Print and test it

Place the code on your card, packaging, or poster and scan it with your phone camera to confirm it opens Instagram — on both an iPhone and an Android.
