

EZQR

How to Make a QR Code for LinkedIn

1

Copy your LinkedIn URL

Grab your personal profile URL (linkedin.com/in/yourname) or company page URL (linkedin.com/company/yourcompany) from the browser address bar. Tip: set a custom public URL in LinkedIn first so the code stays tidy.

2

Paste it into EZQR

Paste the URL into the EZQR generator. The QR code preview appears instantly.

3

Download and print

Download the code as PNG, JPG, or SVG, then print it on business cards, badges, or handouts. Use SVG so it stays crisp at any size.

4

Test the scan on your phone

Scan the printed code with your phone camera to confirm it opens the right LinkedIn page — on both an iPhone and an Android.

Make your own QR code → ezqr.ca/qr-code-for-linkedin

ezqr.ca/qr-code-for-linkedin

Scan the code or visit the URL to get started.
