# How to Set Up an Open House QR Code in 5 Minutes

**1**

## Build the digital sign-in form

Google Forms is the fastest free option. Five fields max. Set responses to email you on submission so you get hot leads in real time.

**2**

## Create a dynamic QR code in EZQR

Sign up, paste the form link, and generate a dynamic code so you can repoint it next weekend to a different listing or form.

**3**

## Print on a table tent at the entrance

4–6cm code with a clear caption: "Scan to sign in & see full listing."

**4**

## Test the scan before guests arrive

Pull out your phone, scan, fill the form out, confirm the response landed. Always test before the first visitor walks through.

**5**

## Repoint the QR for follow-up after the open house ends

Switch the destination to a "Thanks for visiting — interested in similar homes?" page. Anyone who revisits the code afterward lands on your follow-up.
