

How to Make a QR Code for a PDF

1

Upload the PDF to Google Drive

Drag your file into Drive.

2

Set sharing to Anyone with the link

Right-click the file → Share → change "Restricted" to "Anyone with the link." Otherwise people who scan will not be able to open it.

3

Copy the share link

It will look like <https://drive.google.com/file/d/.../view?usp=sharing>.

4

Paste it into EZQR's generator

Click "Create QR Code" and download the PNG, JPG, or SVG.

5

Test it on your phone before printing

Every QR code should be scanned at least once before going out. If it lands on a "Request access" screen, your sharing setting is not right yet.

Make your own QR code → ezqr.ca/qr-code-for-pdf

ezqr.ca/qr-code-for-pdf

Scan the code or visit the URL to get started.
