

EZQR

How to Make a QR Code for TikTok

1

Copy your TikTok link

Open your profile (tiktok.com/@yourhandle) or a specific video, tap Share, and choose Copy link — or copy the URL from the address bar in a browser.

2

Paste it into EZQR

Drop the TikTok URL into the EZQR generator and the QR code preview appears instantly.

3

Style and download

Optionally add your logo, brand color, and a "scan me" caption, then download as PNG, JPG, or SVG.

4

Print and test

Place the code on your packaging, card, or poster and scan it with your phone camera to confirm it opens TikTok.
