

EZQR

How to Make a QR Code Landing Page

1

Create a landing page

In your EZQR dashboard, start a new landing page and give it a heading — your campaign, product, event, or business name.

2

Add your content and buttons

Add a logo or photo, a short bio or blurb, and the buttons you want — book now, shop, watch, sign up. Add an optional hero banner and pick a light, dark, or custom theme.

3

Download the QR code

EZQR generates the QR code that opens your hosted page. Download it and print it on signage, packaging, cards, and ads.

4

Edit and track anytime

Update the page whenever you like without reprinting, and watch the scan count and per-button taps to see what works.

Make your own QR code → ezqr.ca/qr-code-landing-pages
