

EZQR

How to Make a QR Code with Multiple Links

1

Create a link page

In your EZQR dashboard, start a new link page and give it a title — your name, brand, or campaign.

2

Add your links

Add a row for each destination — website, booking, socials, menu, sign-up — then reorder them and add a logo, a short bio, and your colors.

3

Download the QR code

EZQR generates one code that opens your link page. Download it and print it on cards, packaging, signage, and ads.

4

Edit and track anytime

Add, remove, or repoint links whenever you like without reprinting, and see the total scans plus which links people actually tap.
