

EZQR

How to Make a QR Code for Event Registration

1

Pick where guests should land

Your registration or sign-up page, the schedule, a map, speaker info, or a post-event feedback form. For paid entry, point guests to your ticketing provider's page — the code links there, it isn't the ticket.

2

Create a dynamic QR code in EZQR

Dynamic so you can repoint the same printed code from 'register now' before the event to 'leave feedback' after it.

3

Print it on posters, invites, and signage

Add a caption like 'Scan to register.' Keep clear space around the code so cameras lock on fast.

4

Test the scan before the event

Scan a proof on an iPhone and an Android, and fill the form out to confirm it lands, before the print run.

5

Track scans and follow up

See scans by time, country, and device, then repoint the code to a survey or thank-you page once the event ends.
