

EZQR

How to Make a QR Code for Your Hotel

1

Pick what guests should open

A digital in-room directory, guest WiFi, check-in or booking, room-service menu, or a local-area guide.

2

Create a dynamic QR code in EZQR

Dynamic so you can update hours, menus, and local tips without reprinting a single in-room card.

3

Place it in rooms and at the front desk

Compendium cards, desk signs, and door tags, with a caption like 'Scan for the guest directory.'

4

Test on iPhone and Android

Scan from the room, on both phones, to confirm the directory and WiFi join work before rolling it out.

5

Keep it current and tracked

Update linked content from your dashboard and see scans by time and device to learn what guests use most.
