# How to Make a QR Code for Your Music

**1**

## Pick where fans should land

Your streaming profile, latest release, an all-links page, your merch store, or a mailing-list sign-up.

**2**

## Create a dynamic QR code in EZQR

Dynamic so one printed code can point to each new single as it drops — no new code every release.

**3**

## Style it and add it to your art

Add your logo and colors, then put it on gig posters, stickers, merch, and record sleeves with a 'scan to listen' caption.

**4**

## Test before you print

Scan on an iPhone and an Android to confirm it opens the right page.

**5**

## Repoint and track

Switch the destination to your newest release or tour page from your dashboard, and see scans by time, country, and device. For shows, point fans to your ticketing provider.
