How to Make an SMS QR Code

1

Enter the phone number

Type the number the text should go to. Start with a plus and country code (like +1) if any of your audience is international.

2

Write the pre-filled message (optional)

Add a short ready-to-send message — a keyword like 'JOIN' or 'MENU' works well for opt-ins — or leave it blank for a plain draft.

3

Download the QR code

Download as PNG, JPG, or SVG. SVG stays crisp on table tents, posters, and receipts at any size.

4

Scan-test before printing

For safety, phones never send automatically — the person taps send. Scan-test on an iPhone and an Android to confirm the draft opens correctly.
