How to Make a Contact (vCard) QR Code

1

Enter your name

First and last, as you want it to appear when someone saves you into their contacts.

2

Add your phone and email

The two details people reach for most. Everything is encoded directly into the code, so it needs no service behind it and never expires.

3

Fill in company, title, website, and address

Add these for a complete digital business card. Only the fields you fill in are encoded, so leave blank anything you would rather not share.

4

Download the QR code

Download as PNG, JPG, or SVG. Use SVG for print so it stays sharp on a business card at any size.

5

Scan-test on iPhone and Android

Scan the code and confirm your phone offers to create the contact — everything spelled correctly, every digit right — before printing a batch.
